L.L. Bean

Ravex Systems created an as-built, revised set of drawings for L.L. Bean, breaking down the specifications and potential changes that took place during the contract. The work for L.L. Bean included the installation of new lighting throughout the building, new panels, as well as new lighting contactors that were supplied by Ravex Systems. Research and development done by Ravex Systems for both the preliminary visit, in conjunction with the new lighting and how it measured with the architecture of the location.
